Post   **Graduate Trainee BI Developer**

Pay   £20,000 per annum Full time

If you take satisfaction in finding what the data means this is great perhaps this is a great job for you. We are searching for a graduate, who wants to gather, organise and display data to drive business decisions.

Village is a warm place to work and do serious programming solving business problems. We are looking for people who can become great Business Intelligence developers and consultants. In recruiting we will be looking for people who will be good at the job, good for the team and good for our clients.

We will offer a chance to become of an enthusiastic supportive team of people who like to get stuck into commercial BI projects. We are looking for a permanent team member so potential to become a great BI developer within our team is our guiding principle rather than specific technologies to date.

The Job
- The post holder will be involved in the development, maintenance and support of business applications.
- The applications will involve a range of technologies this will include SQL and related technologies (TSQL, SSIS, SSRS, SSAS, Power BI).
- Identifying sources of data in client's organisations, understanding them in discussion with the business people preparing them for reporting.
- You must be able to listen and understand, structure a problem around its data and put across a solution in a way that is listened to by business people.
- The trainee will both work on technical developments and needs identification with clients.

Skills
- Candidate is expected to have communication skills suitable for holding discussions with end users of data. They must have the gravitas to confidently work alongside client's staff.
- A basic competence in software coding will be required alongside an aspiration to strengthen this.
- A good numerate degree and an aptitude for spreadsheets, numbers and other analytical methods would be required. Other demonstrations of technical aptitude and competence may be acceptable.
- A demonstrable understanding of database design and management would be useful.
- We expect people to be curious about the numbers that underpin businesses curious and about how businesses work and then able to manipulate the underlying data to provide insights.

Place of Work
Normal place of work will be in Village's office in Liverpool. However, work will involve short or extended periods of work based at clients in the Merseyside area and periods of work further afield.

Village Software
Village Software is a small, growing software engineering consultancy engaged in the development of bespoke business applications and delivery of business intelligence. We enjoy working together because it is a professional technical environment with a family feeling and strong values. You can get a feel from our website www.villagesoftware.co.uk or phone and chat to one of the team.

Applying: Please send a covering letter along with your current CV to the contact named below.
